

ENERGY

Conductor AS has developed a high level of expertise in the energy sector after many years of work. We create complete package solutions and installations for waste incineration plants and urban heating/biogas plants that also involve service contracts. We also do instrument calibration on pressure and temperature equipment in this field.

Projects

We have already delivered a number of installations in this field in recent years. The biggest delivery went to Hafslund Varme AS. We built their incineration plant for urban waste at Borregaard. We had two contracts here, one with Hafslund Varme AS for electrical constructions involving lighting, fire alarms, access control and ICT, and another contract with Energos to deliver the installations for electrical processing instrumentation. We recently delivered an installation to Østfold Energi's plant at Kalnes to provide heating and cooling to the new county hospital at Kalnes.
