

INFRASTRUCTURES

Conductor has extensive experience working with installations for public infrastructures. We offer expertise in roadway lighting, tunnel lighting and ventilation. We can offer complete package solutions that include lighting calculations, installations, testing and commissioning, as well as service.

Projects

Our largest infrastructure project so far is the delivery for the Vestereelv road interchange in Fredrikstad, which is part of an ongoing upgrade to county highway fv-108. We provided the street lighting and pumping station for Park & Anlegg AS, the approach zone on the new Værste Bridge for Skanska, and lighting and ventilation for the Bjølstad tunnel for the Norwegian Public Roads Administration. After that we were involved in a number of major and minor projects in the counties of Østfold and Akershus.
